EDUCATION

Cornell University

B.S. in Electrical and Computer Engineering, Minors in English, Computer Science (**GPA: 4.01**)

M.Eng. in Electrical and Computer Engineering (Planned)

Ithaca, NY

Expected May 2027

Expected Dec 2027

Relevant Courses: Information Theory, Embedded Systems, Large-Scale ML, Intro RL, Intro ML, Optimization Theory

Activities/Clubs: President, Logos Philosophy Club; Tau Beta Pi Engineering Honor Society

PROFESSIONAL EXPERIENCE

Kiso Technology | *Applied AI Consultancy*

San Francisco

Member of Technical Staff Intern

June 2026–August 2026

- Researched, implemented, and tuned a Temporal Fusion Transformer from the original paper; ensembling its forecasts with existing models yielded \$15M in projected client savings over the next-best approach.
- Improved demand forecasts across 10K+ SKUs and 2M+ observations by engineering and combining deep learning and LightGBM residual forecasts with tailored ensembles for warm- and cold-start products.
- Built a modular time-series forecasting framework supporting cross-validation, hyperparameter optimization, configurable aggregation strategies, and custom error metrics.

Samaritan Scout | *Volunteering Search Engine*

Remote

Head of Technical Development

May 2024–August 2025

- Built LLM-powered ETL pipelines that scraped 12K+ nonprofit sites and generated 30K+ volunteer opportunities.
- Rebuilt search and data infrastructure with vector search, multithreaded ETL workers, and real-time monitoring.
- Shipped authentication, recommendations, onboarding, and search features; managed production deployments.

PocDoc | *Point-of-care blood testing*

Cambridge, UK

Software Intern

July 2025

- Developed computer vision software for automated manufacturing defect detection.
- Built operational models for staffing, inventory, and ordering decisions.

RemNote | *Memory-oriented note-taking app*

Remote

Software Engineer

January 2022–June 2023

- Shipped PDF annotation, rich text, dark mode, and collaborative learning features in a 1M+ line React codebase.
- Improved React performance through platform-wide rendering optimizations and refactors.
- Collaborated with 12+ engineers on feature development, code reviews, testing, and developer tooling.

PROJECTS

Maxims

www.maxims.app

Multimodal Knowledge Visualization

June–August 2025

- Built a knowledge visualization platform using multimodal embeddings and UMAP/t-SNE.
- Developed modular embedding pipelines and D3.js visualizations for thousands of nodes.
- Designed a local-first architecture (Next.js, TypeScript, IndexedDB, Bun) with offline support, extensible plugin system, and modular pipelines for parsing, encoding, and visualization.

GPS-Free Bicycle Computer

bike.wyattsell.com

Embedded Navigation System

April 2021–April 2023

- Built an embedded navigation computer that localizes cyclists using WiFi fingerprinting, eliminating reliance on GPS hardware.
- Designed a memory-efficient geospatial indexing pipeline that transforms MAC-address and RSSI observations into on-device location estimates.
- Implemented real-time wireless scanning, sensor fusion, and custom map rendering in C on a resource-constrained microcontroller.

SKILLS

- **Languages:** Python, C/C++, TypeScript/JavaScript, Java, SQL, Bash
- **Machine Learning:** PyTorch, scikit-learn, LightGBM, time-series forecasting, vector search
- **Technologies:** React, Next.js, Node.js, FastAPI, PostgreSQL, Redis, pgvector, Docker, Linux, GitHub Actions
